

CUSTOMER: Mr Tony Goodyear, Heating Engineer

LOCATION: Nottingham

HEATING SYSTEM: Gas Condensing Combi Boiler

PROBLEMS:

- New condensing boiler fitted within the past 12 months had failed to rectify noise from pump and problems with air present in the system.
- System generally very noisy.

We were approached by Mr Goodyear through his regular supply merchant in Nottingham who had reported to Mr Goodyear that we had a product that could possibly rectify his heating problems.

Having first spoken to Mr. Goodyear about the current situation with his heating system we advised the installation of the new Vortex Energy Saver unit with a little caution at first simply because the unit had never been installed on a sealed system. Although Vortex Energy Saver is designed to fit in all types of systems every other unit sold had been installed within a gravity fed system with two tanks in the loft. We therefore had little or no historical data on its performance with a sealed system.

Mr Goodyear took the unit with a promise to keep me informed of the result of the new installation.

Mr. Goodyear rang me to report that the problems the old system was manifesting had disappeared within the first 10 minutes of re-commissioning the system, which was now:-

- RUNNING ALMOST TOTALLY SILENTLY.
- THE DIFFERENCE IN THE BOILER PERFORMANCE WAS SUCH THAT THE MAIN THERMOSTAT WAS TURNED BACK A FULL ¼ TURN.
- HEAT UP AND RECOVERY TIME WAS FASTER.

Mr Goodyear is exceedingly pleased with the performance of the Vortex Energy Saver unit and admitted he was very sceptical of my claims. He reports that he will have no hesitation in recommending Vortex Energy Saver to cure the ills of heating systems, including those with condensing boilers, where he reports there can still be significant energy savings.

Update 07/09

An updated report in July 09 from Mr Goodyear reveals that the boiler is turned down even further. The main thermostat is now set one third below the original setting. Everything is now running silently.

Mr. Goodyear's gas bill was around £525.00, but since the installation of Vortex Energy Saver is now £150.00 down on previous bills. This represents a reduction of 28.5%.
