

Energy Saving

THROUGH HOME AUTOMATION

NuVision Energy now offer a complete home automation range that is easy to install and use but above all saves the customer money.

The Internet has changed everyone's lives in the last few years and the flexibility of wireless has allowed the connection and control of many devices which has brought greater control and potential cost saving.

Integrated packages such as Mi Home are designed to turn a house into a smart home without the hassle of complicated and expensive wiring.

Control is through your phone, tablet or PC allowing the customer complete control of heating, lighting and domestic loads.

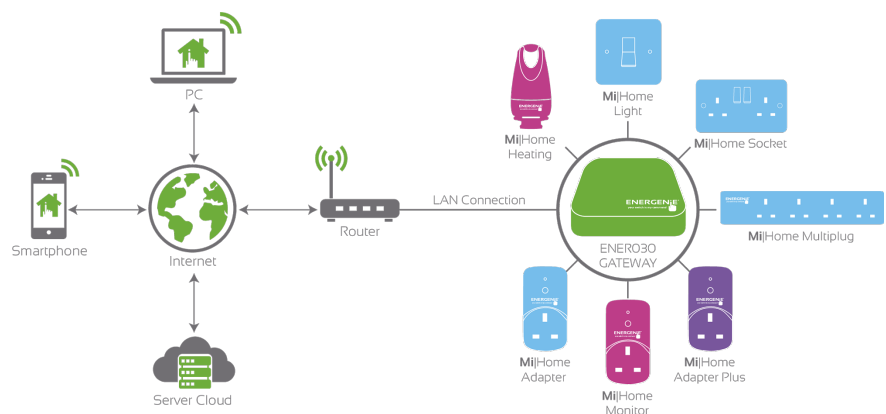

Wireless eTRV valves & Hub

WIRELESS ETRV - REDUCING THE COST OF HEATING

Changing existing Thermostatic Radiator Valves actuators for wireless units is straight forward, and adaptors allow them to be fitted to most manufacturers valves.

These battery operated eTRV's connect easily to the hub allowing individual times, temperatures and operating parameters to be set for each radiator achieving savings through precise control but delivering heat where and when its required.

Energy Saving

THROUGH HOME AUTOMATION

Home automation is flexible and expandable; additional controls can be added at any point and integrated to allow for further savings from off peak electricity or free energy from PV systems.

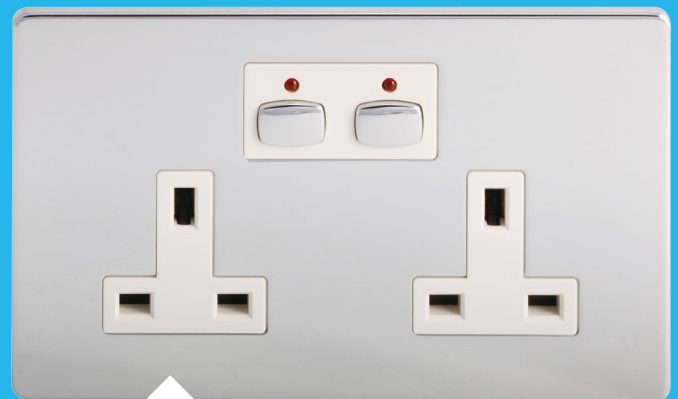

Connection to the hub of any of the following equipment can expand a system and savings

Retrofit sockets with simple remote or can be operated through an app

Energy Monitoring delivering electricity usage

Wall mounted sockets with remote wireless Control - available in different finishes.

3kW realay - controlling Immersions etc.
